

FOR IMMEDIATE RELEASE

Decatur Hills and Waga Energy Celebrate Ribbon Cutting for RNG Facility in Greensburg, Indiana

In operation since July 2026, the facility turns landfill gas into renewable energy for the local community

GREENSBURG, Ind., Oct. 21, 2026 — Decatur Hills Landfill and Waga Energy (Euronext Paris: WAGA) held a ribbon-cutting ceremony today to celebrate the renewable natural gas (RNG) facility at the Decatur Hills Landfill in Greensburg, Indiana. The facility has been in operation since July 2026.

The ceremony brought together local and state officials, community members, and representatives of the project partners. Speakers included Mayor Joshua L. Marsh; Curt Publow, Environmental Compliance Manager of Decatur Hills Landfill; Guénaél Prince, CEO of Waga Energy Inc.; and Allison Gladstone, Director of Business Development at U.S. Energy®, a U.S. Venture company.

Joshua L. Marsh, Mayor of Greensburg: *"It is great to see additional international investment happening in Decatur County. Innovative alternative energy projects like this show how energy generation can be part of our community while supporting local jobs, encouraging further investment, and contributing to a stronger domestic energy supply."*

The facility captures the gas naturally released by decomposing waste at the landfill, which was previously flared, and upgrades it into RNG for the local community. At full capacity, it can process up to 1,000 standard cubic feet per minute of landfill gas and produce approximately 203,000 MMBtu of RNG per year. By displacing fossil natural gas, the facility is expected to avoid more than 15,800 metric tons of CO₂-equivalent emissions annually¹, the same amount of CO₂ emitted by consuming roughly 1.4 million gallons of diesel fuel.

Jessica Routley, CEO of Best Way Disposal: *"For decades, our family has believed in operating our landfills responsibly and continually investing in better solutions. We are proud to partner with Waga Energy to transform landfill gas into a valuable renewable energy resource, creating lasting environmental benefits for the communities we serve."*

The RNG is injected into the CenterPoint local natural gas distribution network through a nearly 2-mile interconnection financed by Waga Energy and Decatur Hills Landfill and is sold to U.S. Energy for delivery to end markets.

Allison Gladstone, Director of Business Development at U.S. Energy: *"Projects like this demonstrate what is possible when innovative technology, strong partners, and market expertise come together. We are proud to connect the renewable natural gas produced at Decatur Hills with markets where it can deliver meaningful environmental and economic value."*

Waga Energy, a global expert in RNG production from landfill gas, financed and built the facility and will own and operate it for at least 20 years. Decatur Hills Landfill performed the site's development and invested in the natural gas interconnection.

Guénaél Prince, CEO of Waga Energy Inc.: *"We are proud to celebrate this milestone with Decatur Hills Landfill and U.S. Energy, two partners who share our long-term vision. By turning gas that was once flared*

¹ Based on the U.S. Environmental Protection Agency (EPA) Landfill Gas Energy Benefits Calculator.

into renewable energy delivered through the local grid, this project creates lasting value for Greensburg and its residents. It shows what strong local partnerships can achieve for the energy transition.”

About Decatur Hills Landfill and Best Way Disposal

Decatur Hills Landfill and Best Way Disposal have been serving the Greensburg, Indiana community since 1991. Family-owned and operated, Decatur Hills and Best Way are part of The Balkema Companies, a group of businesses with shared family ownership across the waste management, recycling, construction, and aggregate industries.

With roots in Kalamazoo, Michigan, the family of businesses operates throughout Michigan, Indiana, Kentucky, and Ohio. Built on simple principles, be humble, work hard, and go make a difference, the companies share a commitment to providing high-quality services, responsible environmental practices, and elevating standards for clean land and air.

About Waga Energy

Founded in 2015, Waga Energy produces competitively priced renewable natural gas (RNG, also known as biomethane) by upgrading landfill gas using a patented purification technology called WAGABOX®. The RNG produced is injected directly into the gas distribution networks that supply households and businesses, providing a substitute for fossil natural gas. As of the date of this press release, Waga Energy operates 38 RNG production units in France, Spain, Canada and the United States, representing an installed capacity of more than 7.1 million MMBtu (2.1 TWh) per year. Twenty-one units are under construction in France, Italy, Spain, Brazil, Canada and the United States. Each project initiated by Waga Energy contributes to the fight against climate change and to the energy transition. Waga Energy is listed on Euronext Paris (FR0012532810 – WAGA).

About U.S. Energy

U.S. Energy, a U.S. Venture company, delivers flexible, full-service energy solutions across traditional fuels, alternative energy, and environmental credits. Our renewable natural gas (RNG) business supports customers across the full value chain, connecting supply to end markets through sourcing, marketing, logistics, and compliance services across North America and international markets. Backed by 75 years of market expertise, we combine deep industry knowledge with a nimble, customer-first approach to keep operations running smoothly. From supply and logistics to risk management and environmental credit strategies, we help simplify energy—so customers can stay focused on their business.
